Space and combination heaters

Which products covered in EEPLAINT?

Ecodesign Regulation applies to:

- Oil-, gas-fired and electric boilers for space heating with a rated output up to and including 400 kW
- Oil-, gas-fired and electric boilers for combined space and water heating with a rated output up to and including 400 kW

The *Energy Labelling Regulation* applies to:

- Oil-, gas-fired and electric boilers for space heating with a rated output up to and including 70 kW
- Oil-, gas-fired and electric boilers for combined space and water heating with a rated output up to and including 70 kW

Space and combination heaters

Which products covered in EEPLAINT?

Large spread in products, focus needed

- < 70 kW? Labeling and ecodesign
- 70 – 400 kW? Only ecodesign
- Space or combination – or both?
- Oil boilers
- Gas boilers
- Heat pumps (ground source, air source)
- Packages or stand-alone products?

Characteristics of space and combinations heaters

Three new issues in ERP-regi

- Sales channels for private consumers and private home owners: Typically no traditional dealers. Dealers are installers / contractors. (in some countries show rooms)
- Product packages
- Big products for B2B

Resources

- Man power: 14,5 person months + external consultancy and facilitator
- 373.500 € for product purchase, transportation and testing
- 2,5 mio. € for EEPLIANT in total

Cooperation with industry and stake holders

- Product selection
- Market weaknesses?
- How to approach point of sales (especially installers)
- General exchange of informations
